

## Phase 2 Updated EER | CS 6400 - Spring 2018 | Team 046

Modifications based on Phase 1 feedback:

- Changed “ADMIN USER” / “NORMAL USER” relationship from disjoint (d) to or (o)
- “Bid” entity changed to double line clearly indicating it is a weak entity
- Added missing notation (N to 1 relationship) between “Bid” and “AUCTION ITEM”
- Removed unnecessary entity “Auctions Ended”, removed its attributes “ended time, winner, sale price”, these values will be calculated by hardcode when updating auction results
- “Review” cardinality changed to N to M relationship, reflecting the fact that multiple users can give their comments on the same item, and each user can review multiple items
